WELCOME

Dear Colleagues,

It is our great pleasure to welcome you to the **4th European Training Symposium (ETS)** on Advanced Heart Failure Therapies, taking place from June 18–20, 2026, in Hannover, Germany.

Advanced heart failure remains one of the most challenging areas in cardiovascular medicine. While mechanical circulatory support (MCS) and heart transplantation (HTx) are essential for selected patients, modern management is increasingly driven by optimized medical therapy and innovative treatment approaches.

Key Developments

- Guideline-directed quadruple therapy
- Novel neurohormonal and disease-modifying treatments
- Advances in precision medicine and biomarker-guided care
- Emerging gene- and RNA-based therapies

What to Expect

This symposium offers a focused and forward-looking overview of:

- Pharmacological, mechanical, and surgical therapies
- Patient selection and timing of interventions
- Current and next-generation MCS technologies
- Right heart management and anticoagulation strategies
- Interdisciplinary insights (e.g. material science, robotics)
- Who Should Attend
- Cardiologists
- Cardiac surgeons
- Perfusionists and VAD coordinators
- Physicians and general practitioners
- Nurses and medical technical assistants

Join Us in Hannover

We invite you to join us for three days of high-level education, interdisciplinary exchange, and international networking. We look forward to welcoming you.
